

Noureddine El Mobaraki

Front-End Engineer — React, TypeScript, Vite

Casablanca, Morocco (remote-friendly) · +212 612-806932 · noureddinelmobaraki@gmail.com

Portfolio: noureddinelmobaraki-web.github.io/portfolio · GitHub: github.com/noureddinelmobaraki-web

SUMMARY

Front-end engineer who ships web products end to end: interface, motion, state, tests and release. Self-taught since 2021, with three products live in production, each trilingual (Arabic, French, English) with fully mirrored RTL. Built solo under team discipline: feature branches, pull requests, code review, and CI gates that refuse a red build. Comfortable owning a codebase and comfortable joining one.

SKILLS

Core: TypeScript, JavaScript (ES2022), HTML, CSS, accessibility (WCAG 2.1 AA)

Frameworks: React 19, Vite 6, Tailwind CSS v4, Zustand, React Context, i18next

Interface and motion: design systems in CSS custom properties, GSAP and ScrollTrigger, WebGL and GLSL shaders, Lenis, reduced-motion and device-quality budgets

Platform: Node.js, Express 5, Supabase, Google Apps Script, Web Audio API, hls.js, WebP image pipelines

Quality and delivery: Vitest, Playwright, GitHub Actions, CodeQL, Lighthouse CI, Sentry, decision records

Internationalisation: Arabic, French and English interfaces, RTL mirroring, locale-aware number and currency formatting

EXPERIENCE

Independent Front-End Engineer — own products and client work

Casablanca, Morocco · 2021 – present

- Designed, built and released three production web products: 101,416 lines of code and 256 React components, counted across the three repositories in August 2026.
- Wrote and maintained 302 automated tests in Vitest and Playwright, enforced by 15 CI pipelines covering quality gates, end-to-end journeys, Lighthouse budgets, CodeQL scanning and deployment.
- Delivered every product in Arabic, French and English with mirrored RTL layouts, protected by tests that fail the build when a translation key is missing in any locale.
- Ran solo work like team work: branch, pull request, review before merge, release notes, and a written decision record for every trade-off worth remembering.

SELECTED PROJECTS

MOMENTO — trilingual watch boutique, built for a Casablanca retailer

2026 · Design and engineering · momentowatch.github.io/ma

- Made one typed catalogue module the only source of truth for products, prices and statistics, so a price mismatch between a product card, the cart and the order became impossible.
- Built WhatsApp checkout that serialises the cart into a structured, human-readable message, matching the channel this market actually closes sales in, plus a shipping-tariff dataset for Moroccan cities.
- Shipped 8,809 lines and 21 components with 44 unit tests and 4 CI pipelines; three locales with full RTL and locale-aware currency formatting.

PRISM — configurable digital-art commerce

2026 · Own product · Design and engineering · prismmoo.github.io/ma

- Wrote one pure pricing module (six size tiers, three finish multipliers, multi-panel packs) as the single source of truth, so the configurator preview and the submitted order can never disagree.
- Built a spatial wall visualiser and an order pipeline with client-side image compression, an enforced payload ceiling, retry with backoff and explicit failure states.
- Shipped 281 kB gzipped JavaScript and 22 kB gzipped CSS across more than 2,000 modules, six-second production builds against a recorded baseline, and a serverless Apps Script back end with no recurring cost.

NL — music and media platform

2025 – 2026 · Own product · Design, engineering and release · noureddinelmobaraki-web.github.io/NL

- Built a Web Audio playback engine with gain-node crossfading, preloading and a state machine that survives rapid seeking and track changes without stutter or leaked nodes.
- Drove timestamped LRC lyrics from requestAnimationFrame rather than interval polling, so highlighting cannot drift from the waveform; added six themes as pure CSS custom-property sets, switched with one class and zero re-render.
- Shipped 63,786 lines, 189 components and 142 hooks with 227 tests across 46 files and 7 CI pipelines, plus an Express 5 service beside the static front end.

EDUCATION

Self-taught front-end engineer, 2021 to present. Learned by shipping production software and then maintaining it: performance budgets, accessibility, internationalisation and continuous integration learned on products that real users depend on.

LANGUAGES

Arabic (native) · Tamazight (native) · English (professional) · French (conversational)

AVAILABILITY

Open to full-time team roles, contract and freelance work. Based in Casablanca, comfortable working remotely.
